

How to submit an Equirectangular movie

1 Download “Amateras Dome Player”

<https://www.orihalcon.co.jp/amateras/domeplayer/en/>

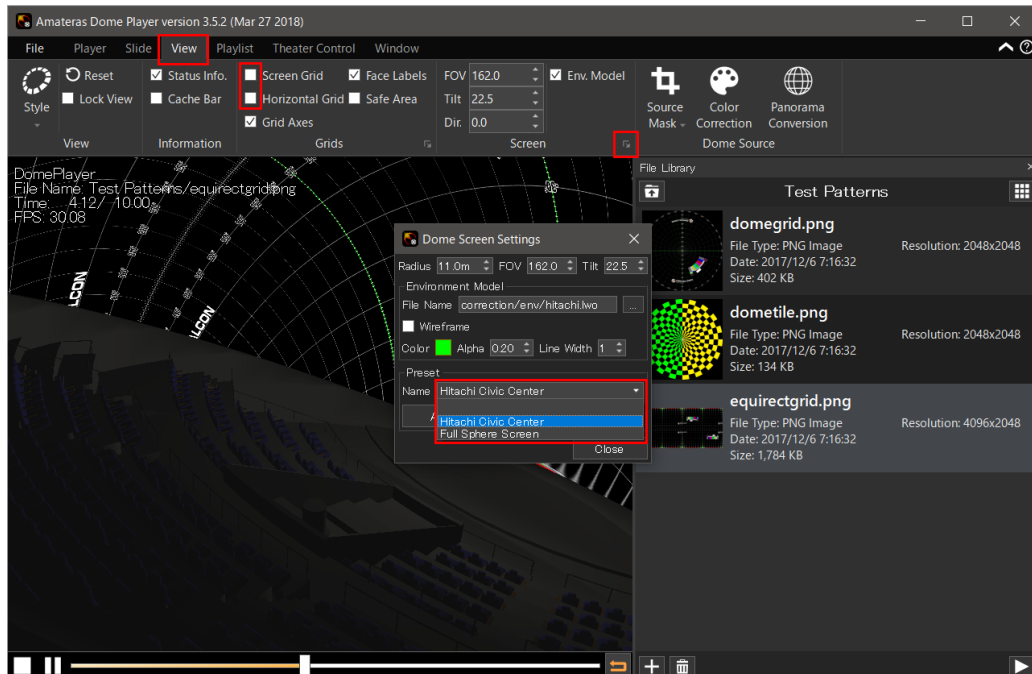

2 Encode your movie with “Amateras Encoder” using “No Resize High Quality” profile.

(It will generate two files, a movie file .mp4 and audio file .wav.)

3 Launch “Amateras Dome Player”, then drag & drop your encoded movie file.

4 Click a small icon at right bottom corner of [Screen] group in [View] tab to open “Dome Screen Settings” dialog. In the dialog, select “Hitachi Civic Center” in [Preset]/[Name] pull down menu, then click [Close] button to close the dialog. Uncheck [Screen Grid] and [Horizontal Grid] check boxes in [View] tab.

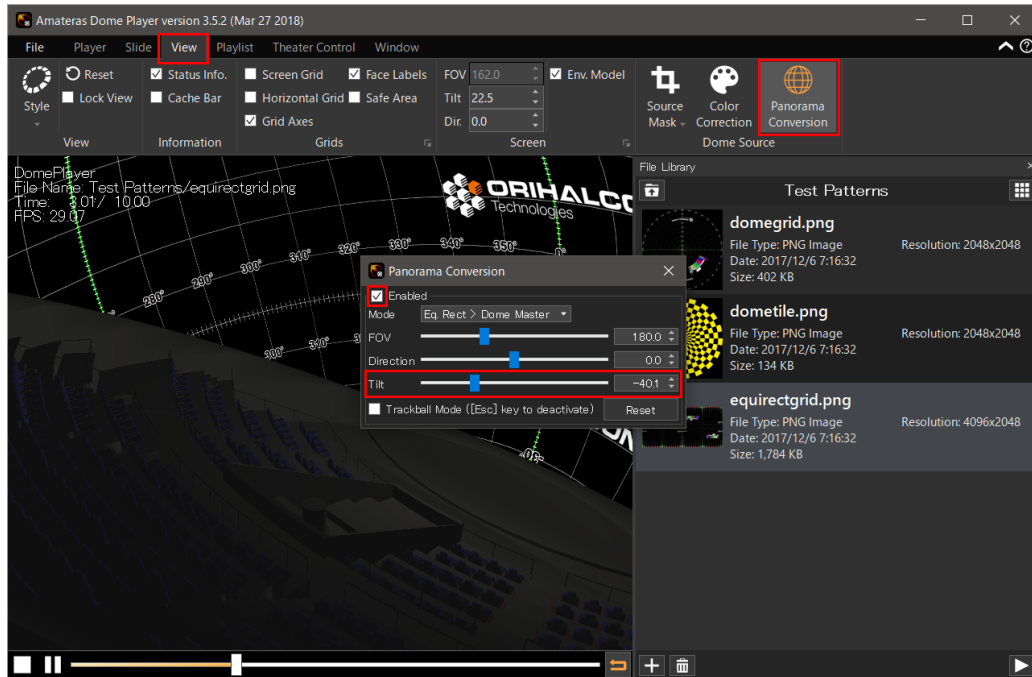

5 Select [Wide View] or [Camera] in [Style] button in [View] tab.

How to submit an Equirectangular movie

- Click [Panorama Conversion] button in [View] tab to open “Panorama Conversion” dialog. Check [Enable] check box and adjust [Tilt] to find the proper value for your movie.

You can not change the tilt value during the screening. Check your movie from many view points by mouse dragging with left button Please check the appearance of your movie from various angles throughout the whole length with the left mouse drag and consider the best tilt value without problem.

- When you submit your movie, send the encoded “movie file”, “audio file” and “Tilt value”.
